

sustema

ANTIMICROBIAL SURFACE PROTECTION

Sustema developed a line of antibacterial high-pressure laminate surfaces and powder coated paint treatments for its products including control room consoles, 911 dispatch furniture, workbenches, and conference tables. Antimicrobial surfaces help prevent and reduce up to 99.5% of microbes found on high touch areas by avoiding the growth of microorganisms such as bacteria, viruses, and fungi. The result is a cleaner and safer work environment. If properly maintained, the antimicrobial agents can remain effective for the entire life of the product. In order to be made available for the public, antimicrobial work surfaces went through multiple tests such as the ISO22196:2011, JIS Z2801, and ASTM G21 to prove their effectiveness.

KEY PROPERTIES

- Kills over 99.5% of surface microbes
- Inhibits the growth of dangerous bacteria, mold, mildew and fungi
- Provides protection over an extended period of time
- Reacts to an increase in humidity by releasing more silver ions
- Retains anti-microbial properties even after repeated washings
- Can be formulated for exterior durability
